

ACOUSTIC DIFFUSER – WOODY FRACTAL 34

description

Premium QRD acoustic diffuser for high-end audio to make you stand out. Designed with superior efficiency in mind while maintaining a lean look. It is the only QRD diffuser based on prime n7 that has a panel depth of just 10 cm and scatters soundwaves from 350 Hz higher.

Unique design with folded wells and fractal.

Woody Fractal 34 is thinner than every QRD diffuser on the market with similar properties. The deepest wells of the panel are folded so the whole construction can be thinner by 4 cm than it would be with the standard QRD build.

The bottoms of the wells are made with tiny narrow channels - that's the fractal. It's actually another small diffuser formed on the bottom of the well to increase the efficiency of scattering of the highest frequencies. With fractal, the diffuser can scatter frequencies past 8k Hz.

how to use

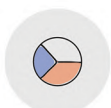

properties

- 100% Czech handmade product with a quality guarantee
- Practical working range: from 350 Hz, past 8k Hz
- Luxury wood finish
- Wall hanging system included
- Made to measure version available on request

eco-friendly

made in the Czech Republic

handmade

honest work

dimensions and packaging

- 30 x 120 x 10 cm (width x height x depth)
- Weight approx. 10kg
- The product package consists of 2 diffusers

patented design

To make sure you are getting a unique and authentic experience, we have patented our signature design of burned wood.
