

ACOUSTIC PANEL – WOODY QUEEN

description

Woody Queen is designed to improve acoustic comfort in your room by absorbing unwanted reflections of sound waves. Its size (60 x 120 cm) and three thickness options (5, 10, 15 cm) make it a perfect choice for a range of applications without compromising your acoustic needs.

WOODY QUEEN STANDARD

Designed to eliminate those pesky echoes in your dining room, home theatre, or listening room, the absorber instantly improves your listening experience and well-being. Panel thickness 5 cm.

WOODY QUEEN PERFORMANCE

Primarily intended to create a perfect listening position in Hi-Fi rooms, rehearsal spaces, and music studios. A true must-have for all music enthusiasts and producers. Panel thickness 10 cm.

WOODY QUEEN PERFORMANCE BASS

While boominess (an abundance of low-end frequencies that drown out higher frequencies) is a real concern when recording, it is not always a bad thing. If controlled, it adds fullness to your records. This absorber is designed to give musicians and producers full control over boominess. The result is recordings that stand out. Panel thickness 15 cm.
