

BASS TRAP – WOODY WAVY

description

Featuring a high-performance membrane technology, Woody Wavy is a handcrafted acoustic absorber designed to tame the lowest frequencies.

Combining the technologies used in the membrane as well as conventional porous absorbers, Woody Wavy offers the biggest absorption effectiveness you can find. Designed to sit or hang in the corner of the room, Woody Wavy boasts exceptional effectiveness at the lowest frequencies (40-80 Hz) while doing a very good job in mid and high frequencies as well.

SUPERIOR EFFICIENCY

The absorber features a heavy yet flexible diaphragm that works like a spring thanks to an air-tight cavity behind it. When low-frequency sound energy hits the membrane, it causes it to vibrate, transforming energy into vibrations. There is also an additional porous layer behind the membrane that the air is pushed through, as well as a thin absorption layer in front of it.

This sophisticated solution ensures superb functionality because both low and high frequencies are absorbed while giving you perfect control over the reverberation of the room.

properties

- 100% Czech handmade product with a quality guarantee
- Contains eco-friendly PET felt Envizol (recycled plastic)
- Safe and healthy materials only: no glass or mineral wool used
- Instant absorption of low-frequencies between 40 - 80 Hz, additional absorption of frequencies 200 Hz+
- Luxury wood finish
- Corner placement - wall hanging system included
- Made to measure version available on request

eco-friendly

made in the Czech Republic
